

MICHAEL POOLE

Apprentice, R&D Fabricator

Lippert

[LinkedIn Profile](#)

My name is Michael Poole, work at Lippert Components currently as a fabricator in R&D. I have been in my current role for two years working on production improvements. I work closely with our lean manufacturing team as well as team members to improve the working environment of our production team.

Prior to R&D, my career started with Lippert 10 years ago, eight of which I spent in Quality. During this time, I learned about quality processes and procedures and implemented internal and vendor corrective actions as well as improvement processes to impact our service in warranty departments. While in Quality, Lippert gave me the opportunity to achieve a certificate from Villanova University in Lean Manufacturing and Six Sigma. By completing this training, it opened doors to many Kaizen events as well as the completion of multiple A3 report outs.

My passion is art and creativity, one of the many exciting things I can do at Lippert is bring my artwork to different plants by painting murals that are unique to each plant. The murals represent unity, a signature of what each plant represents in the larger picture, that is Lippert. Bringing team members together through art and a visual representation of who we are.
